Exercise 1 - Class and Object

IAD2133 | OBJECT ORIENTED PROGRAMMING
TOPIC: The Car System

NAME : balqis binti awaluddin PHONE : 0147992127

MATRIC : 3252001501 EMAIL :3252002501@student.unisel.edu.my
NO.

Objective: To create a class (blueprint) and instantiate two objects (instances).

Task:

1. **Define the Class:** Create a class named `Vehicle`.
2. **Attributes:** Add two variables: `String brand` and `int speed`.
3. **Constructor:** Create a constructor that allows you to set the `brand` and `speed` when you create the object.
4. **Method:** Create a method `showDetails()` that prints: *"Brand: [brand], Speed: [speed] km/h"*.
5. **Main Method:** * Create an object named `car1` with the brand **"Toyota"** and speed **120**.
    - Create an object named `car2` with the brand **"Honda"** and speed **150**.
    - Call `showDetails()` for both objects.

```java
public class Vehicle {
    String brand;
    int speed;

    Vehicle(String brand, int speed) {
        this.brand = brand;
        this.speed = speed;
    }

    void showDetails() {
        System.out.println("Brand: " + brand + ", Speed: " + speed + " km/h");
    }

    public static void main(String[] args) {
        Vehicle car1 = new Vehicle("Toyota", 120);
        Vehicle car2 = new Vehicle("Honda", 150);

        car1.showDetails();
        car2.showDetails();
    }
}
```

```
Brand: Toyota, Speed: 120 km/h
Brand: Honda, Speed: 150 km/h
[Finished in 1.0s]
```
