Exercise 1 - Class and Object

IAD2133 | OBJECT ORIENTED PROGRAMMING
TOPIC: The Car System

NAME	**: NUR BATRISYIA BALQIS BINTI MOHD AZRAF**	**PHONE**	**:0162860496**
MATRIC NO.	**:3252002191**	**EMAIL**	**:3252002191@student.unisel.edu.my**

Objective: To create a class (blueprint) and instantiate two objects (instances).

Task:

1. **Define the Class:** Create a class named `Vehicle`.
2. **Attributes:** Add two variables: `String brand` and `int speed`.
3. **Constructor:** Create a constructor that allows you to set the `brand` and `speed` when you create the object.
4. **Method:** Create a method `showDetails()` that prints: *"Brand: [brand], Speed: [speed] km/h"*.
5. **Main Method:** * Create an object named `car1` with the brand **"Toyota"** and speed **120**.
    - Create an object named `car2` with the brand **"Honda"** and speed **150**.
    - Call `showDetails()` for both objects.

Source code:

```java
public class Vehicle {
    String brand;
    int speed;

    public Vehicle(String brand, int speed) {
    this.brand = brand;
    this.speed = speed;
}

    void showDetails() {
      System.out.println("Brand: " + brand + " speed " + speed + " km/h ");
    }

    public static void main(String[] args) {
      Vehicle car1 = new Vehicle("Toyota ", 120);
      Vehicle car2 = new Vehicle("Honda ", 150);

      car1.showDetails();
      car2.showDetails();

    }
}
```

Output:

```
Brand: Toyota  speed 120 km/h
Brand: Honda  speed 150 km/h
[Finished in 2.5s]
```
